States with Attainment Goals

Updated as of September 2018

Has Strong Attainment Goal*

Has Attainment Goal with a Majority of Components of a Strong Goal

In Process of Developing an Attainment Goal

* A strong attainment goal is quantifiable, challenging, long-term, addresses closing equity gaps and is adopted in a way to drive policy and practice.
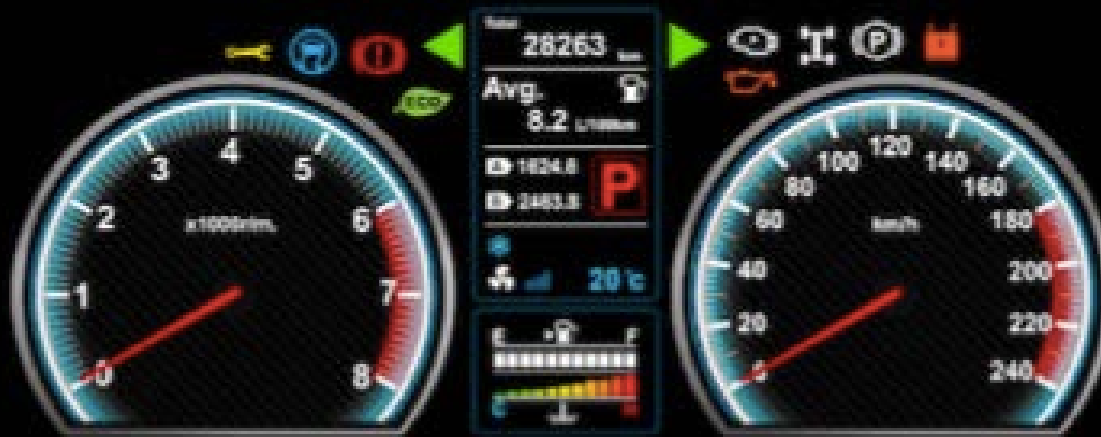

Making the Case

State-level metrics and accountability dashboards can:

- Help track progress toward and maintain focus on attainment goals;

- Display information from across disparate data systems in one location;

- Help leadership to develop targets and evaluate outcomes; and

- Provide stakeholders a snapshot of where the state is on important indicators and the size of the gap to reach targets.

What do we mean by "dashboard"?

- A single display of a small number of important, high-level metrics

- Allows the user to relatively quickly understand the outcomes the state is trying to achieve and the progress it is making to get there

Think of a car dashboard...

Key Steps

➢ *Identify key indicators of progress*

➢ *Ensure indicators are disaggregated to provide insights into gaps and progress for particular populations*

➢ *Develop a publicly-accessible, online dashboard that visually displays and explains the importance of these priority indicators*

Select State-Level Progress Metrics

- *Start with discussions about state priorities, performance and needs*

- *Identify approximately 8-10 metrics*
  - Education Attainment
  - College Readiness
  - Enrollment
  - Progress and Completion
  - Affordability and Finance
  - Economic Development and Workforce

Elements of a Well-Designed Accountability Dashboard

- *Aligns to the state's attainment goal*

- *Presents a limited number of high-level metrics (8-10)*

- *Disaggregates metrics by student demographics (e.g., race/ethnicity, gender, income level, age) whenever possible*

- *Provides trend data*

- *Is updated when data become available, but minimally annually*

- ***A dashboard is NOT a state longitudinal data system (SLDS) or data fact book***
